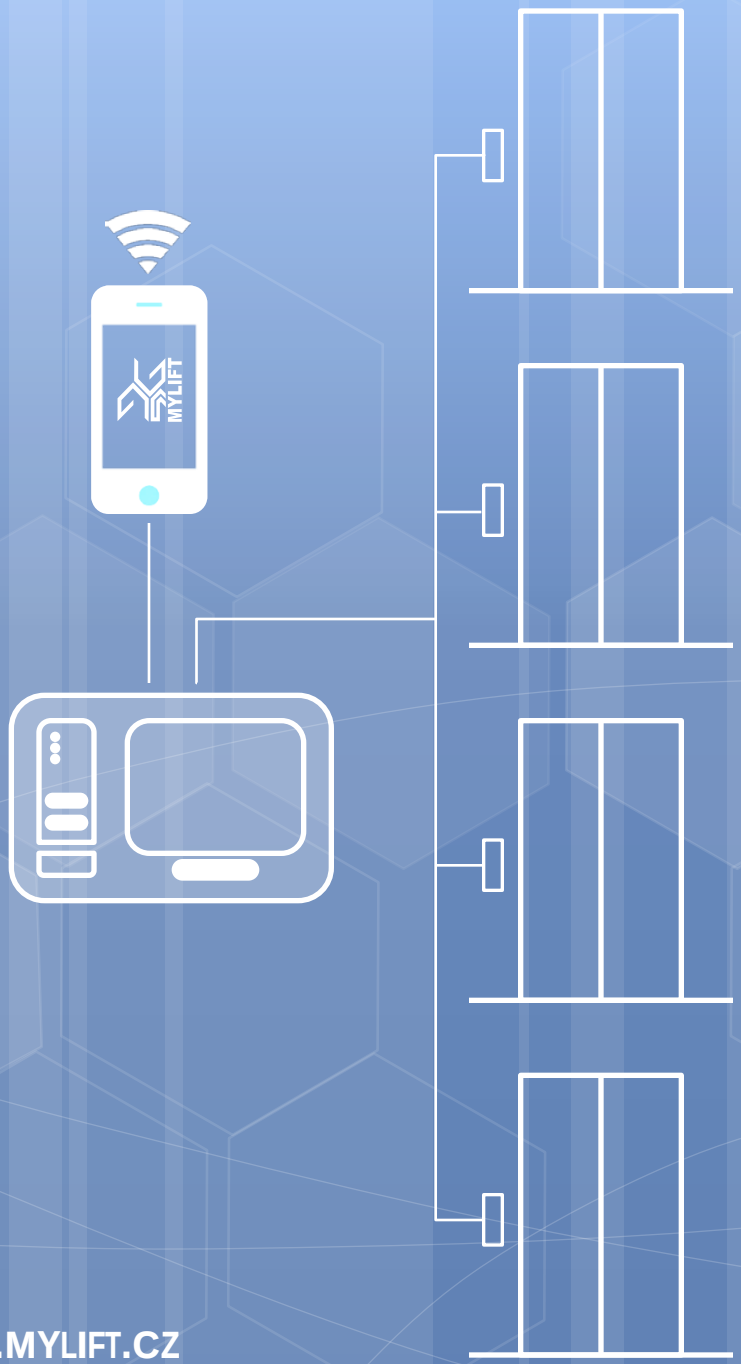
SYSTEM MYFault



The company MYLIFT s.r.o. is pleased to present a new “MYFault” system which, thanks to the combination of different MYLIFT systems, guarantees extremely functional and easily accessible product.

The “MYFault” equipment is based on “PRG” series. It is a programmable system which after connecting to the elevator verifies its status and if necessary, it passes this information to our call center.

Its primary function is to check whether the elevator is working and if not, than report us so we can the most effectively intervene.

Its incredible speed in connection with the whole chain MYLIFT enables rapid intervention, often before the user notices the disorder.

High memory and program capacity and elasticity of the system allows easy implementation into almost the all types of elevators, whether they are older types or elevators of other producers.

The speed of assembly ensures almost continuous operation thus minimize the discomfort of the users caused by the shutdown of the elevator.

For more information contact our staff, we will be glad to prepare the customized solution suitable to your needs.
